FULL SPECTRUM OR BROAD SPECTRUM?

- Full Spectrum and Broad Spectrum are only different in the way of THC detection. Full Spectrum oils are made with compliant hemp and are processed less since you do not remove the THC. Broad Spectrum Oil requires another step in the processing to ensure the THC detection is 0.
- There is no known scientific evidence that one is more effective than the other. We recommend using whichever product you are most comfortable with.

PRODUCT HIGHLIGHTS:

- Made with Certified Organically Grown USA Hemp
- Broad Spectrum and Full Spectrum Profile options
- MCT Oil Base for maximum benefits
- Meets Strict standards to be granted use of the National Animal Supplement Council's (NASC) Quality Seal

Benefits of using CBD

- Supports a normal inflammatory response
- Supports a calm and relaxed demeanor
- Supports good neurological function
- Supports a normal immune system
